

# Taller 1

Miguel A. Gomez B.

February 12, 2020

**Plot** The results are too big to be handled by the python graphics library, which is why I only plot those my computer can manage to graph:

The entire dataset calculated is on the file *values* and is a csv, delimited by '|'.

## Biggest Lucas Number founded

Actually is too big to put it here, the size of the file that contains it is almost 5M, it is called *biggest*, and the number was founded at iteration 19800000.
